However, this device has a significantly larger screen and thus a few other features. Tablets are being described as the perfect combination of a smartphone and a laptop. They're more convenient for browsing and watching movies compared to a phone, but not as useful as a laptop when it comes to productivity. There are tablets in all price ranges on the market today, and they all offer various features. Top tablets from Apple and Samsung, for example, are comparable to laptops and can even make a good replacement for a laptop if you buy a keyboard. However, the interfaces are not completely optimal for advanced users. A much more common area of use is leisure. Tablets are, above all, the perfect device to bring along when travelling. A Samsung product manager couldn't go into explicit details, but hinted strongly that a new input method might be coming to new Samsung-made tablets." I think a pen interface continues to make a lot of sense across a number of screen sizes, like the larger is more obvious of those. That's about as specific as I can be without announcing a product," product marketing manager Ryan Biden said in an interview for LaptopMag. The S-Pen on the Galaxy Note uses Wacom active digitizer technology for input which means that it's much more accurate than capacitive styli. You can easily use the S-Pen for handwriting and sketching, something you'd find more challenging to do with a capacitive stylus. Currently, only the 7-inch HTC Flyer supports stylus input, which makes it stand out in the crowd. And that's definitely one possible and logical strategy for differentiation in the Android tablet market for Samsung. It's not certain, though, so we'd hold our excitement until we get an official confirmation from the Korean company. How do you like the prospects, though? Here are some of the key areas you should look at before getting an Android tablet for drawing. Display size/ Type 10.5 inches is considered an ideal size for a tablet. If you get a bigger tablet you may have to compromise with portability. Similarly, if you go with a smaller screen you will not get enough area to work with. The tablet screen you will not get enough area to work with more expensive tablets. The AMOLED screens are considered better due to their ability to create perfect black colors. AMOLED screens also consume less power, giving better backup. Battery backup. Battery backup. Battery backup. Battery backup. with poor battery performance really limits its uses - especially outdoor uses. Fast charging is another feature that plays a big role. Tablets have bigger batteries than smartphones and it can take quite a while to get your device fully juiced up. Fast charging drastically reduces the charging time. Stylus/ pen One of the most important things you want in your pen is the consistent-reliable strokes. It is very easy to get too fancy and start comparing the pen-based on pressure sensitivity or tilt support but if they have basic issues like line jitter then you will have a hard time drawing stuff. The S-Pen which comes with Samsung devices is great in terms of consistency of lines. Next comes the pressure sensitivity which makes the line thicker or thinner based on the pressure you apply. Some pens come with tilt support but that is only supported in few apps. Many pens come with one or two buttons at the sides which work as a shortcut -mainly uses to switch between pen and eraser and can be very handy. Last but not least - some stylus is active stylus whereas others are passive stylus. The active stylus has batteries inside which needs to be charged. The passive pen where no charging is required - but the active stylus battery can last weeks on a single charge, so both are equally good. Processor - A better processor will make your experience better especially in multitasking. Thickness Talking about important things, here is something which is not really important but still brands try to make it one. A thin tablet looks cool and feels nice but after a certain point, it starts to affect the device. You don't really want a lower battery capacity just to make your tablet look thin.
